

OTDR Fiber Optic Tester Head

Overview

Compact OTDR-based remote test unit designed for FTTx PON deployments, fiber-optic network monitoring, and troubleshooting. EXFO's remote fiber testing and monitoring (RFTM) solution enables FTTx service providers, altnets and contractors to build high-quality passive optical networks (PON) right from the start, reducing costly rework. The OTU-5000 Optical Test Unit combines optical time-domain reflectometry (OTDR) and optical-switch technology to provide continuous OTDR monitoring of multiple fibers anywhere in the network. The FiberMASTER OTDR is available in 4 options, Quad, multimode, single-mode and PON. Automate optical network monitoring with the most compact rack-mounted, remote OTDR test unit on the market. Ensure continuously good service at construction, service activation and beyond.

OTDR Fiber Optic Tester Head

Optical Test Head , Remote Fiber Testing and Monitoring System

This automated, expert-level testing eliminates the need to manually configure parameters or analyze complex OTDR traces. The algorithm discovers elements on the fiber and displays pass/fail results,
