

# Optical Cable Manufacturing Technology

## Overview

---

Optical cables are born from ultra-pure glass preforms, drawn into hair-thin fibers, coated for protection, bundled strategically, and encased in durable jackets. The portfolio ranges from solutions and equipment for enveloping, sleeving, wrapping & stacking, cast-on-strap to the assembly of automotive, motorcycle, industrial, and e-mobility batteries. Fiber optic cables are the backbone of today's high-speed internet, telecommunication systems, and data transfer technologies. Unlike traditional copper cables, fiber optic cables use light signals to transmit data, which allows them to carry large amounts of information at extremely high speeds. Single-mode fiber represents the pinnacle of long-distance optical transmission technology. At Sinoptec, our advanced manufacturing processes ensure each fiber meets rigorous.

## Optical Cable Manufacturing Technology
