

Peeling off the bundled tail fiber sheath

Overview

The coating can readily be removed with conventional fiber stripping tools such as the Clauss CFS-1 or Fitel S-210 for fiber with a 125 μm cladding diameter or a Clauss No Nik stripper for cladding diameters larger than 125 μm . 2 Corning Cable Systems ribbon interconnect cables are lightweight, flame retardant cables designed for high performance transmission of digital and analog signals in process. Just pull the two strength membranes apart and gently peel the fibre away from whatever side its stuck to. These procedures can be applied with any Emt oduc Insert Fibre Unit into the tool. This best practices document is a step-by-step guide for end and midspan access of loose tube optical cable, including sheath removal, core preparation, and fiber preparation. Local company practices and/or vendor specifications may be in place concerning cable access and how it relates to a.
