Regulations for the Sale of Explosion-proof Dust Distribution Boxes

Overview

The ATEX Directive 2014/34/EU covers equipment and protective systems intended for use in potentially explosive atmospheres. The directive defines the essential health and safety requirements and conformity assessment procedures, to be applied before products are placed on the EU. All regulations on explosion protection are established by German law, including the German Protection at Work Act, and national and international standards. ATEX standards are regulated by European directives and specific equipment marking.
