

# SLM optical modulator

## Overview

---

A spatial light modulator (SLM) is a device that can control the intensity, phase, or polarization of light in a spatially varying manner. SLMs are primarily marketed for image projection, displays devices, and maskless lithography. (MIIPS) is a technique based on the computer-controlled phase scan of a linear-array spatial light modulator.

### spatial light modulator

A spatial light modulator (SLM) is a pixellated liquid crystal device that can individually control the phase value of each pixel. It imposes spatially varying modulation onto an incident beam, allowing for the
