

Scraper Bridge

Overview

A scraper bridge is a mechanical construction forming an integral part of a waste-water treatment plant. It is used for clearing sediment into a sludge collector pit or alternatively for depositing floating substances into a scum removal container. Designed to separate out the solids from the liquid by either settlement or flotation. Designed for efficiency, durability, and ease of maintenance, our scrapers deliver reliable sediment and sludge removal to support the smooth operation of circular.

Scraper Bridge

Europelec

The Scraper bridge is designed to be installed in circular settling tanks. Hundreds of scraper bridges installed over the last 60 years. Most popular related searches scraper bridge industrial wastewater
