Splitter position matching successful

Setting a TSplitter position at runtime

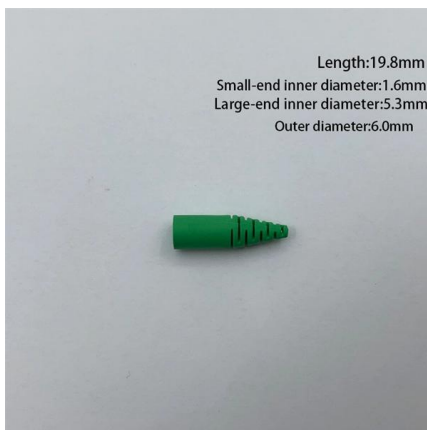

I want to set the vertical position of the splitter at runtime. Basically, I want to save the form, and later load it so the two Memo's are set as the User may have set them before. No matter

Length:33.5mm
Small-end inner diameter:4.0mm
Large-end inner diameter:6.0mm

Splitter Position Property

If the splitter is horizontal, the position is the vertical coordinate of the top of the splitter. Wiring a value to this property positions the splitter at the new location as if you had moved the splitter by hand.
