

Standard three-level distribution box 380220

Overview

The low-voltage distribution box supports surface-mounted/flush-mounted installation, offering high safety performance. It integrates functions such as overload protection, short-circuit protection, leakage protection, metering, and intelligent control. Here, decentralized electrical installation has proven its worth: Our distribution boxes offer the necessary installation space for pluggable installation - for the most diverse applications in the most diverse areas of use: Our distribution box can be used wherever high demands and harsh. Supplier highlights: This merchant is both a manufacturer and trader, offering quality control, full customization, design customization, and sample customization, and primarily exports to Italy, the United States, and Croatia with a 100. Manual transfer function: As a manual transfer switchgear, operators can manually switch power among three generators. When a generator malfunctions, needs maintenance, or based on the factory's power load requirements, the power supply can be manually transferred to other normally operating. XL-21X LV closed type power panel can be used in AC 500V or lower system of three-phase three-wire, three-phase four-wire, three-phase five-wire for electricity-generating and mine enterprises, also for power, lighting, distribution.

Standard three-level distribution box 380220

The Meaning and Function of Primary, Secondary, and Tertiary

Tertiary Distribution System: Connects to end-use equipment via switch boxes, forming a three-tier power distribution system. Incorporates a "two-tier protection" strategy: Residual current devices
