

# **Standard three-level distribution box specifications and models**

## Overview

---

When selecting the right 3 phase power distribution box for your application, prioritize models with UL/CSA certification, proper NEMA enclosure ratings (such as NEMA 3R or 4X for outdoor or harsh environments), and sufficient amperage capacity—typically ranging from 100A to 600A . To meet all specifications (practices, speed of implementation, ease of maintenance, continuity of service, etc. ), Legrand offers three types of solutions: "Standard" distribution, "Optimised" distribution and "Increased Safety" distribution. The handle of the isolator should be 300 mm (minimum) in length on cable connection side as shown in the drawings. Note: The equipment described in this data sheet must be installed by suitably qualified personnel according to applicable Local / National.

## Standard three-level distribution box specifications and models

### Distribution Boards

Easy Installation of outgoing The design of the pan assembly facilitates the installation of outgoing devices. Availability of mixing Mixing two different types of outgoing devices can be provided in
