

The distribution box was making a buzzing sound

Overview

Troubleshooting buzzing sounds in the electrical box involves careful inspection, addressing loose connections, checking for damage, and considering a panel upgrade if necessary. Hearing a strange buzzing noise around your electrical panel can be unsettling, especially if it's something you've never noticed before. It could be due to loose connections, overloaded fuses, or even a faulty earth leakage circuit breaker. When this central hub begins producing unusual sounds, it naturally causes concern for homeowners. Your home's electrical panel, also known as a breaker box, is the central hub that distributes electricity to power your lights, appliances, and devices.
