

# **The fiber optic router cannot be connected via wired connection**

## Overview

---

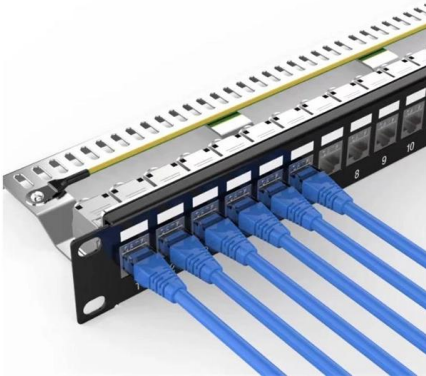

For fiber, your router needs the right WAN connection, speed support, and Wi-Fi capabilities. Routers designed for DSL (which uses phone line inputs) or cable (which uses coaxial inputs) won't work. The process to connect fiber optic cable to router requires careful attention to detail, but I'll walk you through every critical step with the precision and clarity you deserve. This comprehensive guide combines industry standards with field-tested practices to ensure you achieve a rock-solid. This means you don't need a specialized modem-router device, but your router must support high-speed Ethernet input. Is the Cat5e cable not good enough for the fiber internet, do I need a better one?

I have 3 different ethernet cables and they all come to the same problem, they work.

## The fiber optic router cannot be connected via wired connection
