

The function of rollers on cable trays and cable laying frames

Overview

The frame is designed to support the cable and allow cable roller to be laid and wound in a neat and orderly manner. Typically used in construction, telecommunications, and electrical installation, these rollers help to facilitate the running of cables over long distances while minimizing friction. A Cable roller used in underground cable laying operations, usually found on straight stretches where cable is being pulled! Cable rollers are used to guide and support cables during installation, maintenance, and repair.
