

The incoming cable to the distribution box is too large

Overview

Check the electrical load and ensure that the sensors do not exceed the 10 Amp maximum. Any work inside the service area must be performed by personnel that is approved to work with high voltage electrical installations. The question is, can I, according to AS3000 (Australia's wiring rules) have one cable size from the SW/BD to the PIT/JB (let's say 10mm²) and then different cable size for the two branches (let's say 2. 1) Generally, the incoming line of power distribution box adopts five wire system, that is, a, B and C three-way phase line (the general color is yellow, green and red), one way zero line (the color is light blue) and one way ground line (the color is yellow with green stripes). If you pick the wrong box size or put in too many cables, it can get too hot or break.
