

The main switch of the distribution box automatically turns on

Overview

Main Switch: This is the "master control" for the entire distribution box, allowing the entire system to be turned off or on. In an emergency, flipping this switch cuts power to all circuits immediately, ensuring that maintenance and troubleshooting can be done. A distribution box uses MCBs, RCDs, and busbars to protect circuits, prevent shocks, and ensure safe power distribution in homes and buildings. Electrical panels, also referred to as breaker boxes or distribution boards, are collections of automated switches that regulate power delivery and protect users from electrical hazards.

The main switch of the distribution box automatically turns on

Single Phase Distribution Box (DB) Wiring Diagram and

A distribution board or distribution box is where the main power supply is distributed to multiple loads. And all the switching and protective devices are
