

The noise from the telecom server is really loud

Overview

Discover practical ways to reduce server noise in your data center with smart upgrades, acoustic treatments, and advanced cooling strategies for a quieter workspace. Air-cooled chillers, cooling towers, air handling units, and internal server fans all produce noise levels of up to 100dBAs. The fans in a 1U server are so small that they need to spin at ~10,000 RPM to move enough air to cool the server when it's under full load. my server is noisy af and I sleep next to it what can I do to reduce the noise ?

(i already changed the fans) : r/homelab Try moving it, preferably somewhere down low or have something solid between it and you to block some of the sound.
