

# **Uruguay Delivery Time Micro- module Wall-mounted**

## Overview

---

Every module is factory-built under strict quality control, then assembled on-site in just weeks — not months. This method minimizes waste, reduces environmental impact, and ensures each home meets Uruguay's growing demand for sustainable housing solutions. I have an installation where the modules are mounted vertically, almost flush to the wall. ABB's Control Room offering includes a comprehensive range of solutions designed to optimize the operator workspace for critical 24/7 processes across various industries.

### Usually, the microinverters are installed on the roof below the PV

If I would install the microinverters behind the panels, I would have to allow ample space (approx 5 - 8 cm) between the module and the wall to assure airflow and enough distance from the wooden surface.
