

# **Use ordinary sockets inside relay protection cabinets**

## Overview

---

You could fit an isolator internally in a suitable location so that the sockets can be isolated when not in use to prevent unauthorised use. There are many places throughout our homes that electrical accessories are installed, floor level sockets, light switches halfway up the walls and pull cord ceiling switches. Do not touch the terminal section (charged section) of the Relay or Socket while power is being supplied. Is this a bad idea?

I think I need to up the 3 prong cable to 12AWG, but other than that, are there issues with this?

Clean and safe power socket installation inside a cabinet ☐☐☐ Perfect for kitchen, office, or shop use where hidden power access is needed.

## Use ordinary sockets inside relay protection cabinets
