

Wall-climbing fiber optic cable

Overview

A fiber optic riser cable—designated as OFNR, shorthand for Optical Fiber, Nonconductive, Riser—is a type of indoor fiber optic cable specifically designed for vertical installations. Enter the fiber optic riser cable, a vertical workhorse of modern data transmission. Leviton offers optical cable for a wide range of applications, including a full selection of tight-buffered and loose-tube cables. Where reels are supplied with protective material fitted over the cable, the protection should remain in place until the cable will be installed. Deploying fiber above ground on poles or towers removes the need for underground digging and is particularly useful when the ground is uneven, rocky or both.
