

What are the types of anti-corrosion coatings for cable trays

Overview

Stainless Steel: Highly resistant to corrosion, ideal for harsh environments. In the construction and design of electrical systems, anti-corrosive cable trays selection plays a crucial role in ensuring both the durability and safety of the entire system. Cable trays, which provide vital support and protection for electrical wiring, must be chosen with consideration for the. This white paper compares the High Resistance (HR) and Hot-Dip Galvanising (HDG) solutions and highlights the new High Resistance range, ZnAl. The most commonly used options are: GI trays are made from pre-galvanized steel sheets.

What are the types of anti-corrosion coatings for cable trays

How to choose the type of anti-corrosion layer on the surface of cable

Consequently, the bridge corroded significantly right after completion, necessitating replacement. The anti-corrosion layers on cable trays include hot-dip galvanizing, galvanized nickel, cold galvanizing,
