

# **What does H in the distribution box represent**

## Overview

---

A histogram is a graphical representation of numerical data that shows the frequency distribution of a set of data. Since the ticket 2 is twice as likely as any of the other outcomes, it gets twice as much of the probability. It groups data into intervals (or bins) and displays how often values fall within each range. It consists of a horizontal line, drawn according to scale, from the minimum to the maximum data value. The median (middle quartile) marks the mid-point of the data and is shown by the line that divides the box into two parts.

## What does H in the distribution box represent
