

# **What does it look like to lay optical cables in the same trench**

## Overview

---

When laying optical cables or cables in the same ditch, they should be pulled and laid separately at the same time. It also identifies central distribution points in a hub-and-spoke layout—where a central hub connects to multiple neighborhood branches—often using. Project success depends on careful planning, precise installation practices, and proper. The existing 2" conduit contains 4x 1/0 XLPE cable (rated for direct-burial), so I plan on pulling outdoor rated, non-metallic fiber through the same conduit. My original plan was to trench new conduit and run CAT8, but given that the existing run is all "customer side" and installed by the former.
