

What is a single-fiber bidirectional module for

Overview

BiDi SFP modules use a single fiber strand for both transmitting and receiving data simultaneously. What if you could double your network's capacity without having to add any additional fiber?

BiDi optical modules can do this by utilizing full-duplex communication over a single fiber strand via two wavelengths. By reading this blog, you will understand how SFP BiDi technology allows you to save.

What is a single-fiber bidirectional module for

What is BiDi Transceiver: A Beginner's Guide

BiDi transceiver, or Bidirectional or simplex optical transceiver, is an optical module that uses Wavelength Division Multiplexing (WDM) technology to
