

What is the fiber optic cable support pole called

Overview

A utility pole is a column or post used to support overhead power lines, fiber optic cables and street lights. Deploying fiber above ground on poles or towers removes the need for underground digging and is particularly useful when the ground is uneven, rocky or both. These cables enable data transfer in the form of light, allowing information to be transmitted at very high speeds with far greater capacity compared to. Starting from the bottom "cable" is technically a metal wire called Strand to keep tension on the poles The next line up is either Coax or fiber for 1 company like AT&T, Comcast, Hotwire, fusion and any other provider you can think of The next line above would be the same thing just for another. Enter the Universal Pole Bracket (upb), a game-changer for efficient and secure fiber optic cable installation on various pole types.
