

# **What is the fiber optic splicing tray in the server rack called**

## Overview

---

In most network applications, splice trays are used to protect optical fiber splices and their accompanying fiber slack. A splice tray is a thin, rectangular sheet metal or plastic tray base with a removable sheet metal or plastic cover. Because optical fibers are sensitive to pulling, bending, and crushing forces, use fiber splice trays to provide secure routing and an easy-to-manage environment for fragile fiber splices. Optical fiber termination by fusion splicing or mechanical splicing is very common now with the increasing development of fiber optic network.

## What is the fiber optic splicing tray in the server rack called
