

What type of wire is RV in the distribution box

Overview

Use 10-gauge wire for the main connections and 12-gauge wire for the secondary circuits. In an RV, AC power is the type of electricity supplied by your shore power cord when it's plugged into power pedestals at campgrounds or home electrical outlets. When it comes to making repairs or upgrades to your RV, one of the most important components is the 50 amp RV distribution panel wiring diagram. There's a 12-volt DC system powered by batteries that runs lights, water heater ignition, furnace startup, and refrigerator controls.
