

# **Where should the wiring of the distribution box module be connected**

## Overview

---

Wiring Direction: Wiring between the main circuit breaker and each branch circuit breaker in the box generally goes on the left, and the wiring out of the distribution box generally goes on the right. Choose the right box based on environment (indoor/outdoor), load capacity, and durability. Ensure safe placement: install in dry, accessible areas with good ventilation and at appropriate height (typically ~1. A distribution board (commonly called a consumer unit in domestic installations) is the central point where the incoming electrical supply is split into individual circuits that serve different areas and appliances throughout the building. The output of the Main MCB is to be connected to the input of the RCCB and the output of the RCCB is to be connected to the output MCBs. It includes isolator, RCCB (Residual current circuit breaker) or RCD (Residual-current device) devices, protective fuses or MCB's (Miniature Circuit Breaker).
