Integrated photonics enabling ultra-wideband fibre-wireless

Here we present an ultra-wideband (UWB) integrated photonics scheme that facilitates fibre-wireless communication over a shared-bandwidth infrastructure.

What is fiber to the home (FTTH)?

Fixed wireless vs. FTTH Fixed wireless differs slightly from FTTH. Instead of switching from fiber optics to a metallic cable at the endpoint, fixed wireless transmits a wireless signal into the

Fiber-optic communication

OverviewHistoryBackgroundApplicationsTechnologyParametersComparison with electrical transmissionGoverning standards

In 1880, Alexander Graham Bell and his assistant Charles Sumner Tainter created a very early precursor to fiber-optic communications, the Photophone, at Bell's newly established Volta Laboratory in Washington, D.C.. Bell considered it his most important invention. The device allowed for the transmission of sound on a beam

of light. On June 3, 1880, Bell conducted the world's first wireless telephone transmission between two buildings, some 213 meters apart. Due to its use of an atmosphere
