

# **Zinc-plated or ungalvanized cable trays**

## Overview

---

Most wire mesh cable tray is coated with zinc for corrosion protection, but the difference lies in the application process. The mechanical and electrical characteristics, tests, certifications, overall quality management, recommendations mentioned in this technical guide only apply to our own cable management ranges and cannot under any circumstances be transposed to silicone, overheating or. The galvanization process is the primary anti-corrosion treatment for cable trays. Our market-leading cable tray system is now available in ZM (Zinc Magnesium), as well as existing finishes (pre-galvanized, hot-dip galvanized, powder coated and stainless steel). ZM is a metallic coating applied to steel which is made up of a chemical composition which includes Zinc, Magnesium and. They are a lightweight option for organizing bundles of cable and hose while keeping them accessible. Cable tray systems are defined to include, but are not limited to straight sections of [ladder type] [trough type] [solid bottom type] [channel type] cable trays, bends, tees, elbows, drop-outs, supports and accessories.
